

Modifications to transport safety lock for drum in front of the hub

from week 45/2019

General aspects

As part of our ongoing optimisation process, the nuts of the wheel studs are being replaced with the spigot wheel nuts for the transport safety lock for the drum in front of the hub.

OLD · Nut	NEW · Spigot wheel nut · NEW

What does this mean for you?

On axles with 10 wheel studs, for example, the number of spigot wheel nuts supplied loose will be reduced from 20 to 16, as 4 spigot wheel nuts will be used to secure the brake drum. The 4 spigot wheel nuts of the transport safety lock are then used again for fitting the wheel rims.
