New brake lining on brake calliper KNORR SK7 of the 22.5" GIGANT disc

General

Due to a change of the brake lining by our supplier for the KNORR SK7 brake calliper with the 22.5" disc, we are switching suppliers for the brake linings. The trusted brake calliper KNORR SK7 will continue to be available!

The changeover is planned for the 3rd quarter of 2026.

Example illustration: Brake calliper KNORR SK7

What will change?

- For the OEM, a new item number will be introduced for the brake callipers with the new brake lining set.
- In the OES, the brake lining set will be given a new item number.

Designation	Until changeover in Q3 2026	After changeover in Q3 2026
Brake calliper 4345 SK7 Version A with lining	703024135	703033744
Brake calliper 4345 SK7 Version B with lining	703024134	703033743
Brake lining set for 1st axle SK7	703024881	703033742

Effect:

- The change has no effect when installing the brake calliper on the axle. However, the brake power calculation must be adjusted to the new friction lining.

Homologation:

- The test protocol for its homologation for the SK7 is: 361-037-13 Suffix 02 for friction lining KB5111 for the brake callipers used after the changeover in the 3rd quarter of 2026.
- The test protocol is available as a free download under <https://www.gigant.com/service/pruefprotokolle/>.

The GIGANT team is happy to answer any questions you may have and wishes you a safe journey.
